

## O&O Defrag 28: Optimization, repair, and management in one solution

Berlin, March 19, 2024

**Berlin-based O&O Software GmbH is releasing O&O Defrag 28, the latest version of its system optimization solution for Windows 10 and 11. This new version increases performance of the operating system, checks and repairs the Windows Recovery Environment and can help with managing IT infrastructures.**

Defragmentation on a regular basis ensures maximum speed, extends the life of hard disks and creates greater data security. Intensive Optimization (O&O IntensiveOptimize) is the fastest and most comprehensive optimization for Windows disks to date. During defragmentation, a separate and exclusive instance of Windows is started, in which only O&O Defrag is running. This enables it to exploit maximum system performance for optimization as well as access all files at the same time, regardless of whether these are system files or files exclusively locked during Windows operation.

The integration of BitLocker in O&O IntensiveOptimize makes it possible to process the BitLocker-encrypted system partition transparently. This is independent of the security medium used for BitLocker encryption.

The Windows Recovery Environment is of crucial importance to ensure both a functioning operating system and the smooth operation of O&O IntensiveOptimize. Over time, many updates or errors can damage this environment. With the new Check&Repair, users can ensure that their Windows recovery environment is always in optimal condition to ensure a smooth recovery when needed.

O&O Defrag 28 has been redesigned to ensure seamless integration with O&O Syspectr. These improvements allow users to manage their systems even more easily and effectively from anywhere. Some of the outstanding features of the integration include:

**Advanced remote management:** Users can conveniently control and manage their systems from any location without the need for complex installations.

**Windows security management:** With O&O Syspectr, users have control over Windows security settings on all devices. Security policies can be set and Windows updates managed to guarantee security on all systems.

**Windows data protection control:** The O&O ShutUp10++ technology integrated in O&O Syspectr provides comprehensive data protection for Windows 10 and Windows 11. Users can decide which data and telemetry should be shared with Microsoft.

O&O Syspectr offers additional features such as RemoteDesktop, Defender management, software and hardware inventory and monitoring. The purchase of O&O Defrag 28 comes with a free one-year license for O&O Syspectr Premium.

Olaf Kehrer, Managing Director at O&O Software: "With the new functions and the optimized integration of O&O Defrag in O&O Syspectr, we offer our users a comprehensive solution for

system management and system optimization. These improvements allow users to manage and protect their systems even more efficiently, regardless of their location."

### **Pricing and availability**

O&O Defrag 28, including a 1-year license for O&O Syspectr Premium, is now available for 49.95 USD (single computer license) and 99.00 USD (5 computer license). All prices include 19% sales tax where applicable.

For those wishing to test the product, a free 30-day trial version of O&O Defrag 28 Professional Edition is available on the official website: <https://www.oo-software.com/oodefrag/>.

## **About O&O Software**

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
